OBJECTIVE

Applied machine learning, product data quality, or systems & software engineering roles, particularly in physical AI.

ABILITY SUMMARY

Data coordinator for a confidential client through three hardware revisions. Turned an offshore vendor failing most submissions into the leading producer; became the case study for a rapid quality-review framework later taught org-wide. Former Air Force QA inspector.

TECHNICAL SKILLS

C and C++, Rust, Java, Python (Django, PyTorch, Lightning, Pandas), JavaScript and TypeScript (Node.js, React, MapLibre GL, Three.js), SQL, WebAssembly, Lisp, HTML and CSS. Docker, systemd, Tailscale.

EMPLOYMENT HISTORY

Lecturer and Course Developer · *San Francisco State University, SF, CA* 05/2026 – Current

- Progressed from CSC 511: Deep Learning instructional assistant to course developer to lecturer; term ends 26 December 2026.
- Designed an intermediate & interdisciplinary machine learning course; teaching its first offering to 30 students in the Promoting Inclusivity in Computing (PINC) interdisciplinary computing applications minor; anchored ML heuristics in domain-specific examples based on the range of majors in class.
- Students implement gradient descent, backpropagation and attention from scratch, then build a working transformer encoder in PyTorch and Lightning.

Data Coordinator (Shift Supervisor) · *Ascen Workforce, LLC, San Francisco, CA* 02/2026 – 08/2026

- Ran collection operations for a confidential client: a fleet of collection devices, dozens of operators, and a shift structure that grew from a single pilot plan into multi-site production.
- One of three coordinators reporting to the R&D lead point of contact for a new hardware platform, carried alongside the standard coordinator role.
- With a staff ML engineer, aligned captures to narrow the gap between two modalities using a mixed strategy that generalized sufficiently to retarget cheaper captures at scale.
- Queried an undocumented schema with LLMs to build SQL and Retool views to track product and experiment quality across sites. Traced the majority of logged device faults to an idle-timeout error guard that blocked between clips; an alternative procedure with no per-instance downtime growth clarified telemetry.
- During a vendor replacement, aligned ops to cleaner output & better analysis: task instructions rebuilt as form-based objects instead of raw text files, rapid task swapping logic from operator hardware, and replacing operator leaderboard CTEs with functional logic for nearer real-time statistics.

Instructional Assistant · *San Francisco State University, SF, CA* 12/2025 – 05/2026

- CSC 511, Protein Modeling with Deep Learning: led twice-weekly recitations for about 40 life-science students learning AlphaFold2 architectures.
- Wrote tutorial notebooks on model architectures, linear algebra operations, and Lightning; led study guide recitations.
- Diagnosed Colab compute, Python environment errors, and model evaluation with students.

Chapter Co-Chair · *Democratic Socialists of America, SF, CA* 08/2023 – 08/2025

- Elected co-chair of a 2,300-member chapter: ran large meetings under Robert's Rules and planned strategic campaigns. As administrative co-chair, migrated chapter docs to Outline, put three tools behind Auth0 login, and kept fifteen Docker (Portainer) services live.

IT Consultant · *Hacknsleep, San Francisco, CA* 09/2023 – 08/2024

- Repaired Eero and Google mesh networks and Sonic hookups across sublets; recommended the cheapest fix per site and coordinated contract labor for larger installs.

Student, Computer Science · *CCSF / SFSU / Northwest Florida State College, Fort Walton Beach, FL* 11/2021 – 08/2023

- Dean's List, Fall 2022; Full-time, GI Bill.

Crew Chief, then Quality Assurance Inspector · *U.S. Air Force, Eglin AFB, FL* 11/2016 – 11/2021

- Directed 10 contractors and 2 airmen through 3,000 munitions test and 670 maintenance operations. Awarded a signed Special Experience Identifier for the inspection track.
- Reproduced and documented a defect in a published technical order that could result in a hazardous asset mechanical failure, proposed the correction, and carried it through review to a global safety data revision on assets worth more than $500 million. Structured a new Microsoft Access report flow using data from a legacy dbms interface, FOCUS.

EDUCATION HISTORY

Computer Science (B.S.) · *San Francisco State University, San Francisco, CA*

B.S., awarded December 2025. Coursework in data structures and algorithms, operating systems, compilers, database systems, linear algebra, NLP, AI explainability and ethics.

HONORS & ACTIVITIES

Recall-first screening classifier: moving the threshold toward detection cut missed diagnoses from 51 to 16, 68% fewer, for 0.56 points of accuracy; Tailscale for KOReader, making VPNs easy on embedded e-reader hardware.
